Plastic Packaged Surface Mount Varactor Diodes

SMV1100, SMV1200, SMV1400 Series

Features

- Industry Standard Outlines: SOD–323 and SOT SOT 23 Packages
- High "Q" Abrupt and Hyperabrupt Junction Designs
- Single and Common Cathode Configurations
- Available for 3 Volt Battery Operated Circuits
- Priced for High Volume Commercial Applications
- Available in Tape and Reel

Maximum Ratings (Ta = 25 °C)

Description

The surface mount plastic varactor diodes are designed for RF and Microwave applications in VCOs, electronically tunable filters and matching networks. Package offerings include the SOT–23 and the small footprint SOD–323 package. Alpha offers a comprehensive capability in capacitance values, package options and voltage ratings all aggressively priced for high volume commercial applications.

The SMV1200–49 to SMV1200–55 varactors were specifically designed for battery operated applications where 3 to 5 volts is available. These varactors have capacitance ratios of greater than 12 from 0.3 to 4.7 volts.

Alpha's hyperabrupt varactors are available in a wide variety of tightly specified capacitance values and high capacitance ratios. They are available as single junctions and common cathode configurations where they may be employed in a back-to-back orientation to reduce distortion.

Alpha's abrupt junction varactors are noted for extremely high Q factor and are the preferred choice in applications that require low phase noise and high temperature stability.

The inductance of the SOT–23 package is typically 1.5 nH for each junction. Employing a common cathode SOT–23 with the varactor junctions connected in parallel reduces the inductance to approximately 0.9 nH. The inductance of a varactor in the SOD–323 package is approximately 1.2 nH.
2–16 GHz Low Noise Gallium Arsenide FET

Technical Data

Features
• Low Noise Figure: 1.8 dB Typical at 12 GHz
• High Associated Gain: 9.0 dB Typical at 12 GHz
• High Output Power: 17.5 dB Typical at 12 GHz
• Cost Effective Ceramic Microstrip Package
• Tape-and-Reel Packaging Option Available[1]

Description
The ATF-13736 is a high performance gallium arsenide Schottky-barrier-gate field effect transistor housed in a cost effective microstrip package. Its noise figure makes this device appropriate for use in the gain stages of low noise amplifiers operating in the 2–16 GHz frequency range.

This GaAs FET device has a nominal 0.3 micron gate length with a total gate periphery of 250 microns. Proven gold based metallization systems and nitride passivation assure a rugged, reliable device.

Up to 6 GHz Medium Power Silicon Bipolar Transistor

Technical Data

Features
- **High Output Power:**
  - 21.0 dBm Typical $P_{1db}$ at 2.0 GHz
  - 20.5 dBm Typical $P_{1db}$ at 4.0 GHz
- **High Gain at 1 dB Compression:**
  - 14.0 dB Typical $G_{1db}$ at 2.0 GHz
  - 9.5 dB Typical $G_{1db}$ at 4.0 GHz
- **Low Noise Figure:**
  - 1.9 dB Typical $NF_0$ at 2.0 GHz
- **High Gain-Bandwidth Product:** 8.0 GHz Typical $f_T$
- **Cost Effective Ceramic Microstrip Package**

Description
Hewlett-Packard's AT-42035 is a general purpose NPN bipolar transistor that offers excellent high frequency performance. The AT-42035 is housed in a cost effective surface mount 100 mil micro-X package. The 4 micron emitter-to-emitter pitch enables this transistor to be used in many different functions. The 20 emitter finger interdigitated geometry yields a medium sized transistor with impedances that are easy to match for low noise and medium power applications. This device is designed for use in low noise, wideband amplifier, mixer and oscillator applications in the VHF, UHF, and microwave frequencies. An optimum noise match near 50 $\Omega$ up to 1 GHz, makes this device easy to use as a low noise amplifier.

The AT-42035 bipolar transistor is fabricated using Hewlett-Packard's 10 GHz $f_T$, Self-Aligned-Transistor (SAT) process. The die is nitride passivated for surface protection. Excellent device uniformity, performance and reliability are produced by the use of ion-implantation, self-alignment techniques, and gold metalization in the fabrication of this device.

35 micro-X Package
FEATURES
- None-Hermetic Low Cost Ceramic 70mil Package
- +20.0 dBm Output Power at 1dB Compression
- 10.0 dB Power Gain at 12GHz
- 7.0 dB Power Gain at 18GHz
- Typical 1.50 dB Noise Figure and 10.0 dB Associated Gain at 12GHz
- 0.3 x 250 Micron Recessed "Mushroom" Gate
- Si$_3$N$_4$ Passivation
- Advanced Epitaxial Heterojunction Profile Provides High Power Efficiency, Linearity and Reliability

Note: 1. Exceeding any of the above ratings may result in permanent damage.
2. Exceeding any of the above ratings may reduce MTTF below design goals.
LMC6482 CMOS Dual Rail-To-Rail Input and Output Operational Amplifier

General Description
The LMC6482 provides a common-mode range that extends to both supply rails. This rail-to-rail performance combined with excellent accuracy, due to a high CMRR, makes it unique among rail-to-rail input amplifiers.

It is ideal for systems, such as data acquisition, that require a large input signal range. The LMC6482 is also an excellent upgrade for circuits using limited common-mode range amplifiers such as the TLC272 and TLC277.

Maximum dynamic signal range is assured in low voltage and single supply systems by the LMC6482's rail-to-rail output swing. The LMC6482's rail-to-rail output swing is guaranteed for loads down to 600Ω.

Guaranteed low voltage characteristics and low power dissipation make the LMC6482 especially well-suited for battery-operated systems.

LMC6482 is also available in MSOP package which is almost half the size of a SO-8 device.

See the LMC6484 data sheet for a Quad CMOS operational amplifier with these same features.

Features
(Typical unless otherwise noted)
- Rail-to-Rail Input Common-Mode Voltage Range (Guaranteed Over Temperature)
- Rail-to-Rail Output Swing (within 20 mV of supply rail, 100 kΩ load)
- Guaranteed 3V, 5V and 15V Performance
- Excellent CMRR and PSRR: 82 dB
- Ultra Low Input Current: 20 fA
- High Voltage Gain (R_L = 500 kΩ): 130 dB
- Specified for 2 kΩ and 600Ω loads
- Available in MSOP Package

Applications
- Data Acquisition Systems
- Transducer Amplifiers
- Hand-held Analytic Instruments
- Medical Instrumentation
- Active Filter, Peak Detector, Sample and Hold, pH Meter, Current Source
- Improved Replacement for TLC272, TLC277

3V Single Supply Buffer Circuit

Connection Diagram
Surface Mount GaAs Tuning Varactors

MA46 Series

Features

- Low Cost
- Surface Mount Packages
- Very High Quality Factor
- Constant Gamma Abrupt Junction: 0.5
  Hyperabrupt Junctions: 0.75, 1.25 and 1.5
- Capacitance Ratio to 10:1
- Case Style 1056 is Hermetic and may be
  Screened to JANTX levels
- Tape and Reel Packaging Available

Description

M/A-COM offers four families of low cost surface mount gallium arsenide tuning varactors. All families have silicon nitride protected junctions for low leakage current and high reliability.

The MA46H500 through MA46H504 family has hyperabrupt junctions with constant gamma of 1.5 from 2 to 12 volts and high quality factor.

The MA46H200 through MA46H206 family has hyperabrupt junctions with constant gamma of 1.25 from 2 to 20 volts and higher quality factor.

The MA46H070 through MA46H073 family has hyperabrupt junctions with constant gamma of 0.75 from 0 to 20 volts and very high quality factor.

The MA46504 through MA46506 family has abrupt junctions with constant gamma of 0.5 from 0 to 30 volts and the highest quality factor.

Applications

The MA46H500 through MA46H504 (gamma 1.5) family of constant gamma hyperabrupt GaAs tuning varactors is designed for wide bandwidth VCOs and voltage tuned filters where limited bias voltage is available. These varactors have greatest capacitance change versus voltage at the cost of slightly lower quality factor than the other families of GaAs varactors.

The MA46H200 through MA46H206 (gamma 1.25) family of constant gamma hyperabrupt GaAs tuning varactors has the largest capacitance ratio of the families of GaAs varactors and high quality factor. These diodes are very well suited for wide bandwidth VCOs and VTFs where the optimum combination of very wide tuning range and high quality factor is required.

The MA46H070 through MA46H073 (gamma 0.75) family of constant gamma hyperabrupt GaAs tuning varactors has quality factor approaching that of abrupt junction varactors, but higher capacitance change versus tuning voltage. These diodes are very well suited for narrower bandwidth VCOs and VTFs where wide tuning range and very high quality factor are required.

The MA46504 through MA46506 (gamma 0.5) family of constant gamma abrupt GaAs tuning varactors has the highest quality factor. These diodes are very well suited for narrower bandwidth VCOs and VTFs where highest quality factor is of paramount concern.
The Fujitsu MB1502, utilizing Bi-CMOS technology, is a single chip serial input PLL synthesizer with pulse-swallow function. The MB1502 contains a 1.1GHz two modulus prescaler that can select of either 64/65 or 128/129 divide ratio, control signal generator, 16-bit shift register, 15-bit latch, programmable reference divider (binary 14-bit programmable reference counter), 1-bit switch counter, phase comparator with phase conversion function, charge pump, crystal oscillator, 19-bit shift register, 18-bit latch, programmable divider (binary 7-bit swallow counter and binary 11-bit programmable counter) and analog switch to speed up lock up time. It operates supply voltage of 5V typ. and achieves very low supply current of 8mA typ. realized through the use of Fujitsu Advanced Process Technology.

**FEATURES**
- High operating frequency: \( f_{\text{IN MAX}} = 1.1 \text{GHz} \) (\( V_{\text{IN MIN}} = 10 \text{dBm} \))
- Pulse swallow function: 64/65 or 128/129
- Low supply current: \( I_{\text{CC}} = 8 \text{mA typ.} \)
- Serial input 18-bit programmable divider consisting of:
  - Binary 7-bit swallow counter: 0 to 127
  - Binary 11-bit programmable counter: 16 to 2047
- Serial input 15-bit programmable reference divider consisting of:
  - Binary 14-bit programmable reference counter: 8 to 16383
  - 1-bit switch counter (SW) sets divide ratio of prescaler
- On-chip analog switch achieves fast lock up time
- 2 types of phase detector output
  - On-chip charge pump (Bipolar type)
  - Output for external charge pump
- Wide operating temperature: \(-40^\circ \text{C} \text{ to } +85^\circ \text{C}\)
- 16-pin Plastic DIP Package (Suffix: —P)
  16-pin Plastic Flat Package (Suffix: —PF)

**NOTE:** Permanent device damage may occur if the above Absolute Maximum Ratings are exceeded. Functional operation should be restricted to the conditions as detailed in the operational sections of this data sheet. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

This device contains circuitry to protect the inputs against damage due to high static voltages or electric fields. However, it is advised that normal precautions be taken to avoid application of any voltage higher than maximum rated voltages to this high impedance circuit.
μPB1508GV is a 3.0 GHz input divide by 2 prescaler IC for DBS tuner applications. μPB1508GV can make VHF/UHF band PLL frequency synthesizer apply to DBS/ECS tuners. μPB1508GV is a shrink package version of μPB584G so that this small package contributes to reduce the mounting space.

μPB1508GV is manufactured using NEC’s high f r NESAT™ IV silicon bipolar process. This process uses silicon nitride passivation film and gold electrodes. These materials can protect chip surface from external pollution and prevent corrosion/migration. Thus, this IC has excellent performance, uniformity and reliability.

FEATURES

• High toggle frequency : \( f_{in} = 0.5 \text{ GHz to 3.0 GHz} \)
• High-density surface mounting : 8 pin plastic SSOP (175 mil)
• Low current consumption : 5 V, 12 mA
• Fixed division : \( \div 2 \)

APPLICATION

• Prescaler between local oscillator and PLL frequency synthesizer included modulus prescaler
• DBS tuners with kit use of VHF/UHF band PLL frequency synthesizer
