

Product Description

Sirenza Microdevices' SNA-386 is a GaAs monolithic broadband amplifier (MMIC) housed in a low-cost surface-mountable plastic package. At 1950 MHz, this amplifier provides 20dB of gain when biased at 35mA.

The use of an external resistor allows for bias flexibility and stability. These unconditionally stable amplifiers are designed for use as general purpose 50 ohm gain blocks.

Also available in chip form (SNA-300), its small size (0.3mm x 0.3mm) and gold metallization make it an ideal choice for use in hybrid circuits.

Typical Performance at 25 °C (V_{ds} = 3.7V, I_{ds} = 35mA)

Absolute Maximum Ratings

Parameter	Absolute Limit
Max. Device Current (I _D)	70 mA
Max. Device Voltage (V _D)	6 V
Max. RF Input Power	+10 dBm
Max. Junction Temp. (T _J)	+150°C
Operating Temp. Range (T _L)	-40°C to +85°C
Max. Storage Temp.	+150°C

Operation of this device beyond any one of these limits may cause permanent damage. For reliable continuous operation, the device voltage and current must not exceed the maximum operating values specified in the table on page one.

Bias Conditions should also satisfy the following expression:

$$I_D V_D < (T_J - T_L) / R_{TH} j-I$$

Typical Application Circuit

Part Identification Marking

The part will be marked with an "S3" designator on the top surface of the package.

Caution: ESD sensitive

Appropriate precautions in handling, packaging and testing devices must be observed.

R_{BIAS}	36 Ω	68 Ω	120 Ω	180 Ω

Note: R_{BIAS} provides DC bias stability over temperature.

Mounting Instructions

1. Use a large ground pad area under device pins 2 and 4 with many plated through-holes as shown.
2. We recommend 1 or 2 ounce copper. Measurements for this data sheet were made on a 31 mil thick FR-4 board with 1 ounce copper on both sides.

Pin #	Function	Description
1	RF IN	RF input pin. This pin requires the use of an external DC blocking capacitor chosen for the frequency of operation.
2, 4	GND	Connection to ground. For optimum RF performance, use via holes as close to ground leads as possible to reduce lead inductance.
3	RF OUT/BIAS	RF output and bias pin. DC voltage is present on this pin, therefore a DC blocking capacitor is necessary for proper operation.
