V.H.F. POWER TRANSISTOR

N-P-N silicon planar epitaxial transistor for use in class-A, B and C operated mobile and military transmitters with a supply voltage of 13,5 V. The transistor is resistance stabilized and is guaranteed to withstand severe load mismatch conditions with a supply over-voltage to 16,5 V.

It has a '4" capstan envelope with a moulded cap. All leads are isolated from the stud.

QUICK REFERENCE DATA

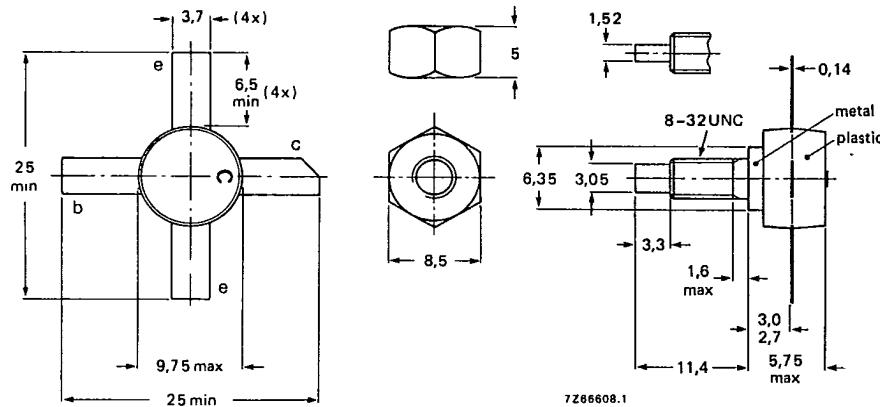

R.F. performance up to $T_{mb} = 25^{\circ}\text{C}$ in an unneutralized common-emitter class-B circuit.

mode of operation	V_{CE} V	f MHz	P_L W	G_p dB	η %	\bar{Z}_i Ω	\bar{Y}_L mS
c.w.	13,5	175	8	> 9	> 70	2,8 + j1,2	76 - j16
c.w.	12,5	175	8	typ. 9	typ. 70	-	-

MECHANICAL DATA

Dimensions in mm.

Fig. 1 SOT-48/2.

Torque on nut: min. 0,75 Nm
(7,5 kg cm)
max. 0,85 Nm
(8,5 kg cm)

Diameter of clearance hole in heatsink: max. 4,2 mm.
Mounting hole to have no burrs at either end.
De-burring must leave surface flat; do not chamfer or
countersink either end of hole.

When locking is required an adhesive is preferred instead of a lock washer.

PRODUCT SAFETY This device incorporates beryllium oxide, the dust of which is toxic. The device is entirely safe provided that the BeO disc is not damaged.

RATINGS Limiting values in accordance with the Absolute Maximum System (IEC 134)Collector-base voltage (open emitter)
peak valueV_{CBOM} max. 36 V

Collector-emitter voltage (open base)

V_{CEO} max. 18 V

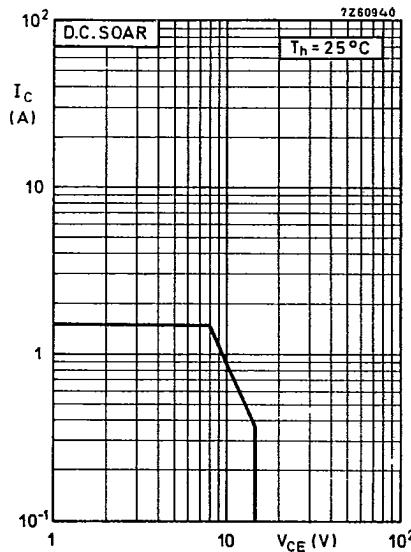

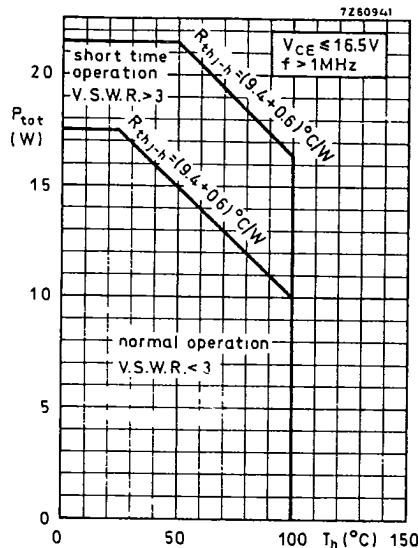

Emitter-base voltage (open collector)

V_{EBO} max. 4 V

Collector current (average)

I_{C(AV)} max. 1.25 A

Collector current (peak value) f > 1 MHz

I_{CM} max. 3.75 ATotal power dissipation up to T_h = 25 °C
f > 1 MHzP_{tot} max. 17.5 W

Storage temperature

T_{stg} -30 to +200 °C

Operating junction temperature

T_j max. 200 °C**THERMAL RESISTANCE**

From junction to mounting base

R_{th j-mb} = 9.4 K/W

From mounting base to heatsink

R_{th mb-h} = 0.6 K/W

APPLICATION INFORMATION (continued)

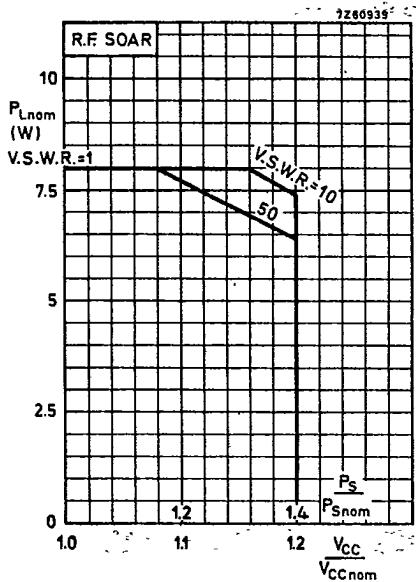

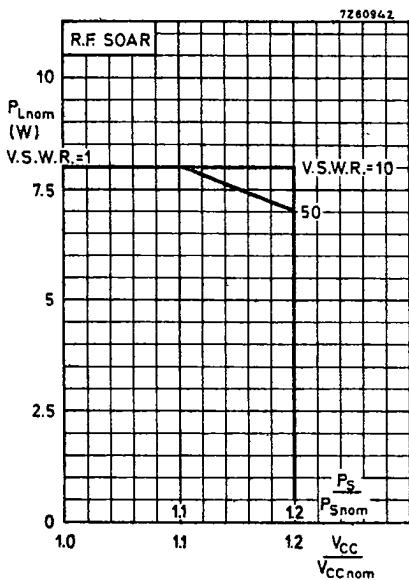

Component lay-out and printed circuit board for 175 MHz test circuit.

The circuit and the components are situated on one side of the epoxy fibre-glass board, the other side being fully metallised to serve as earth. Earth connections are made by means of hollow rivets.

OPERATING NOTE Below 70 MHz a base-emitter resistor of $10\ \Omega$ is recommended to avoid oscillation. This resistor must be effective for both d.c. and r.f.

Conditions for R.F. SOAR:

$f = 175 \text{ MHz}$ $P_{S\text{nom}} = P_S$ at $V_{CC} = V_{CC\text{nom}}$ and $V.S.W.R. = 1$
 $T_h = 70^\circ\text{C}$ $R_{\text{th mb-h}} = 0.6 \text{ K/W}$
 $V_{CC\text{nom}} = 12.5 \text{ or } 13.5 \text{ V}$ see also page 5

The transistor has been developed for use with unstabilized supply voltages. As the output power and drive power increase with the supply voltage, the nominal output power must be derated in accordance with the graphs above for safe operation at supply voltages other than the nominal. The graphs show the allowable output power under nominal conditions, as a function of the supply overvoltage ratio, with V.S.W.R. as parameter.

The left hand graph applies to the situation in which the drive ($P_S/P_{S\text{nom}}$) increases linearly with supply overvoltage ratio.

The right hand graph shows the derating factor to be applied when the drive ($P_S/P_{S\text{nom}}$) increases as the square of the supply overvoltage ratio ($V_{CC}/V_{CC\text{nom}}$).

Depending on the operating conditions, the appropriate derating factor may lie in the region between the linear and the square-law functions.
