

Preliminary data

Bipolar circuit

Fast ECL divider with constant dividing ratio 1 : 64 covering the frequency range between 80 MHz and 1 GHz. Together with the types S 0437, TBB 1331 A and a voltage controlled oscillator, a frequency and phase comparison circuit can be realized for channel selection in TV sets.

- Input frequency up to 1 GHz
- Few external components
- Sinusoidal input signal possible
- 2 balanced ECL outputs in phase opposition
